

TURBO-CR™

Assists in rapid Calculus Removal

Turbo-CR is engineered to assist in the removal of calculus, making hygiene appointments quicker and easier. Featuring patent pending advanced activated foaming technology, Turbo-CR efficiently softens calculus without compromising enamel integrity. Unlike traditional mechanical and ultrasonic scaling methods, Turbo-CR ensures a gentle approach to enamel and dentin, prioritizing patient comfort and oral health.

Feature and Benefits

Significantly Reduces Patient Chair-Time

Turbo-CR empowers hygienist and dentists to optimize their schedules and accommodate more appointments, ultimately enhancing practice efficiency and revenue.

Effortless Procedure

Turbo-CR's unique formulation enables it to flow effortlessly into interproximal and subgingival spaces, reaching areas that are traditionally hard to access.

Improving Patient Care and Appointment Enjoyability

Turbo-CR's comprehensive coverage ensures thorough cleaning and promotes superior oral hygiene outcomes.

Built-in Chromatic Indicator

This indicator, when used with the mixing tips, provides a perfect mix allowing dental professionals to perform hygiene appointments with confidence and precision.

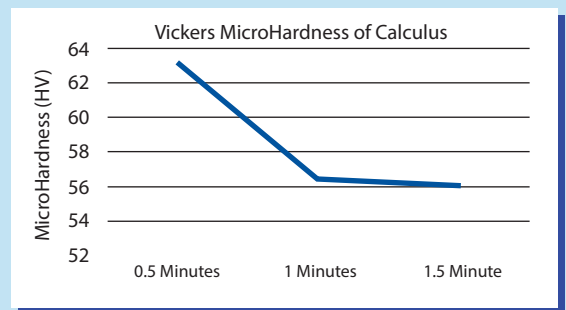

Versatility

Turbo-CR works with various clinical cases from a simple 6-month recall appointment to the toughest scaling and root planing.

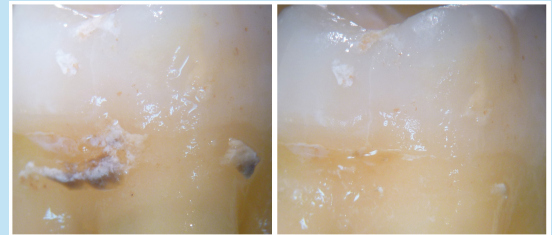

Turbo-CR assists in periodontal cleaning by safely removing calculus buildup without instruments scratching the implant. It preserves the integrity of materials like titanium and ceramics.

Strong on Calculus

Significantly reduces hardness of calculus!

Without Harming Enamel
