

Turbo-CR Independent Product Review

Turbo-CR noticeably softened the calculus and made instrumentation easier. It's easy to administer and has made a significant difference in scaling heavy, tenacious calculus. **I believe this product will transform both the clinician and patient experience.**

Annie Walters, MSDH, RDH, Leading clinician, author, and educator.

I recently tried Turbo-CR, a new calculus-softening product, and I have to say—**I'm impressed.** It was highly **effective at softening both supragingival and subgingival calculus.** What really stood out? The ease of use and how much it **streamlined my workflow.** I had extra time to chat with my patient, which is a nice bonus on any day. – Sheri Doniger, DDS **Leading clinician, author, and educator.**

Turbo-CR Calculus Remover provides **a significant difference in the effort** it took to remove calculus. – Lory Laughter, RDH MS. **Leading clinician, author, and educator.**

I got to use it on an SRP patient a few weeks ago. I had done the right side already. When doing the right side, I ran late on the appointment trying so hard to get the calculus removed. **He was about 60 years old and had never had his teeth cleaned so it was really tenacious.** I used turbo CR on the left side. I applied it with the application tip along the gingival margin which was easy and then rinsed it off. The patient reported it tasted similar to toothpaste so much better than I figured it would be. I re applied it on a couple of tough areas and tried to get it subgingival. It helped a lot. I actually finished the left side with time to spare! - Gina Green, RDH

I just used the product for the first time last week. **I used it on a special needs patient.** I found it was very flowable and easy set up. Due to some limitations, I am not 100% confident the tray stayed in the patient's mouth for the recommended time. **But I was able to remove more sub calculus at this appointment compared to the previous appointment.** I hope to keep trying it out on additional patients. I hope this helps and I will continue sending feedback when I can. - Kaitlyn Machado

I recently tried TURBO-CR calculus softener, and I'm really impressed with the results. It's effective at loosening and softening hardened deposits, making removal much easier and more comfortable for both the clinician and the patient. The formula works quickly and doesn't have an unpleasant odor or taste, which is a big plus. It's a great addition to any dental hygiene, especially for patients with heavy calculus buildup. Overall, an excellent innovation that improves efficiency and patient experience. – Amany Elshafei, RDH

Yesterday, I had the opportunity to use the Turbo-CR with amazing results. The patient was a little hesitant and concerned about gagging with the soft foam tray. I was able to manage that easily by expressing half the amount I thought I needed, placing it slightly more lingual in the tray, and then adding additional material of the facial aspects via the thin nozzle. After the two minutes, the patient rinsed and commented he liked the minty taste.

The calculus literally flaked apart and was easily removed with our magneto-restrictive ultrasonics. This allowed extra time for me to definitively scale one sextant where active disease was present.

I will not hesitate to incorporate this into my therapy going forward.

- Anni Perkowski, RDH

I had the chance to try it on one of my patients, Monday actually, and it was very helpful. I'm really impressed with how well it worked. It was also easy to apply and the patient said it had a good mint taste to it. - Tiffany Amerson Lead RDH

Because you can remove the calculus easier and, in most cases, faster you can maximize your patient education, nutritional counseling, tobacco cessation, oral cancer screenings, other important assessments that are available etc. You definitely can get more into one appointment with Turbo-CR. As well as help you in outreach/public health. – Ashlie Mardis, RDH

As a mobile dentist, I treat a large population of homebound patients, including individuals who are unable to tolerate liquids by mouth, are PEG-fed, or have not received oral care for extended periods of time. In these situations, introducing any new product can be challenging. Turbo-CR has put a wrench in the game for me.

This feedback is based solely on my clinical experience. Turbo-CR performed exactly as described. The product remained on the tooth surfaces within the trays, significantly reducing the risk of patients swallowing excess material. Patients reported no complaints regarding taste, and the product rinsed away cleanly.

I evaluated ease of calculus removal both before and after application, using hand instrumentation and a Cavitron. There was a clear improvement post-application, resulting in reduced chair time and increased patient comfort.

Where Turbo-CR truly stood out was with a PEG-fed patient for whom water use was not an option. The patient presented with heavy calculus covering all tooth surfaces, including occlusal surfaces, and manual removal alone was extremely difficult. Because the product required removal, we worked in small sections, using a wet towel to clear the product. After two applications, the calculus was sufficiently softened to allow complete debridement in a single visit. I believe this would not have been achievable otherwise.

I highly recommend Turbo-CR to dental teams looking to reduce chair time, improve productivity, and enhance patient comfort, especially for practitioners who work with medically complex or special-needs populations like myself.

- Dr. Camille Tabor-Cobb

Turbo-CR has been a game changer for removing stubborn, tenacious calculus! Instrumentation feels easier and more controlled, especially in those tough lower anterior and deep posterior pockets! It gives me the ability to work more efficiently without compromising thoroughness. Patients also appreciate the pleasant mint taste! **Saves time very effective and so easy to use!** – Madison.rdh

Turbo-CR: It is so easy to use, fast-acting, helped remove tenacious calculus **making it easier for me and more comfortable for my patient!** – Shelby.rdh
